

Pratyay Pratim Borah

✉ pratyayborah2005@gmail.com [in](#) /pratyaypratimbora [G](#) /PratyayPB [P](#) Portfolio

Skills

Languages: Typescript, JavaScript, SQL, HTML, CSS.

Frameworks & Libraries: React, Next.js, Node.js, Express, Tailwind CSS, Shadcn/ui, Zod, Clerk.

Databases & Backend: PostgreSQL, MySQL, MongoDB, Prisma ORM, Appwrite, Redis, Trigger.dev.

APIs: GraphQL, REST APIs, Postman

Tools & Infra: Vercel, Cloudflare, Git, GitHub

Projects

Ghost AI – Agentic Architecture Planning Platform | *Next.js, TypeScript, Liveblocks, Trigger.dev, React Flow, PostgreSQL* [GitHub](#) | [Live](#)

- Built an agentic system-design platform that transforms natural-language requirements into interactive architecture diagrams, enabling teams to collaboratively design and refine software systems in real time.
- Engineered real-time multiplayer architecture collaboration with synchronized canvases, live cursors, presence, and auto-save, using Liveblocks, React Flow, Vercel Blob, and PostgreSQL for persistent state management.
- Automated technical specification generation by converting architecture graphs into downloadable Markdown documents through Gemini-powered Trigger.dev background jobs, reducing manual effort in documenting system designs.

GoCart – Scalable E-Commerce Platform | *Next.js, React, Javascript, PostgreSQL, Clerk, Stripe, Gemini API, Inngest* [GitHub](#) | [Live](#)

- Built a scalable e-commerce platform with customer storefronts, vendor dashboards, and an admin portal; designed the data layer with PostgreSQL and Prisma for structured, reliable data management.
- Secured user and role-based access across the platform with Clerk authentication and integrated Stripe for secure checkout and payment processing, enabling reliable transaction workflows.
- Integrated Gemini AI to generate product details from uploaded images, alongside background processing with Inngest and optimized media delivery through ImageKit to streamline product management.

Vaultex – Cloud File Management Platform | *Next.js, TypeScript, Appwrite, Tailwind CSS, Recharts, Shadcn/ui* [GitHub](#) | [Live](#)

- Developed a cloud-based file management platform supporting multi-format uploads, organization, search, and storage analytics; leveraged Next.js and Appwrite for a responsive serverless architecture.
- Implemented fine-grained file sharing and access control using email-based permissions and passwordless OTP authentication through Appwrite, ensuring users retain control over shared files.
- Developed a responsive analytics-driven dashboard with categorized storage insights, multi-criteria sorting, and instant search using Recharts, shadcn/ui, and optimized Next.js components.

Experience

Full Stack Developer – CodeMate Club

Mar 2026 – Present

- Migrated the platform from a React SPA to a full-stack Next.js application with PostgreSQL and Prisma, while building responsive Resources and Alumni directories with filtering and downloadable content, improving SEO, maintainability, and content discoverability.
- Implemented ISR, caching, and on-demand revalidation for frequently accessed public content, reducing redundant database requests while ensuring CMS updates are reflected without full application rebuilds.
- Built Admin and Superadmin CMS dashboards with role-based access control, enabling authorized teams to manage events, galleries, resources, and alumni data using Clerk and database-level permissions.
- Automated transactional email workflows for contact submissions using Resend's REST API, delivering reliable team notifications and user confirmations within the serverless application architecture.

Education

BS in Computer Science

North Eastern Hill University (NEHU)

Minor in Mathematics

CGPA: **8.45/10**

Aug 2023 – July 2026
